

Krestfield PKCloud

Proxy

version 2.0
Copyright Krestfield 2020

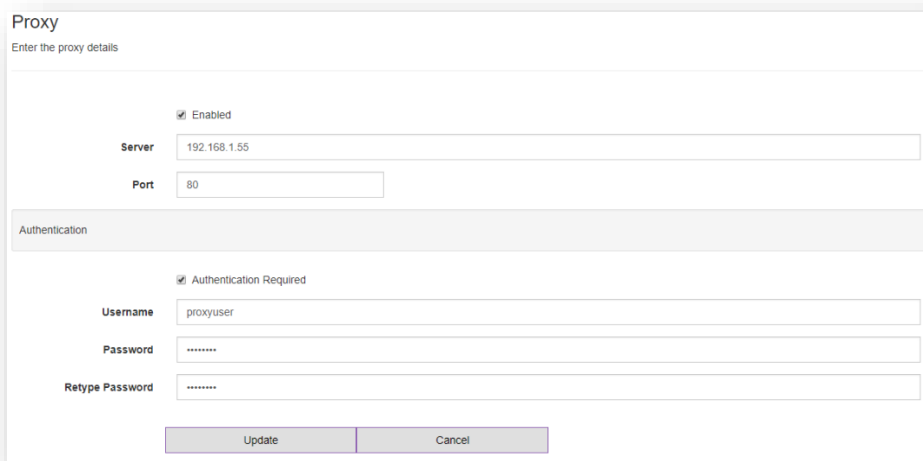

Overview

If there is a proxy server between the PKCloud and the CRL or OCSP servers this can be configured here

Once the proxy has been enabled all traffic accessing URLs will be sent via the proxy

Configuration

Select the **Proxy** menu item and click **Enabled** to enable the proxy settings

The screenshot shows a 'Proxy' configuration dialog box with the following fields and options:

- Enabled**:
- Server**:
- Port**:
- Authentication Required**:
- Username**:
- Password**:
- Retype Password**:
- Update** and **Cancel** buttons at the bottom.

Enter the proxy's server name or IP address in the **Server** field, Enter the port the proxy is listening on in the **Port** field

If the proxy requires authentication, click the **Authentication Required** check box and enter the **Username** and **Password** for the account

Click **Update** to save the settings
